Leak Barriers

Leak barriers play a critical role in roofing system performance:

Choosing the right leak barrier for the job is critical to system performance and to your reputation. So when it comes to leak barriers, how do you know **which product is right for your next job?** Consider the following...

Code Requirements

- **The Codes Are Clear...** In the “North”, building code requires the use of leak barrier at the eaves.
- **Be Prepared...** GAF-Elk highly recommends the use of leak barriers in areas where hail, heavy rains or wind-driven rain are common. Leak barriers help protect against the leaks and damage these storms may cause.

- **Be Confident In Its Performance...** Be sure leak barriers meet or exceed ASTM D1970 criteria and are UL approved accessories in the installation of the full roofing system.
- **Feel The Difference...** “Mat Surfaced” products (with specially formatted compounds) may increase the feeling of traction under foot, especially on steeper slopes.

Shingles, Metal or Tile?

- **Understand Compatibility...** Mineral surfaced leak barriers aren’t recommended for use with metal. They may abrade metal roofing over time, leading to leaks and premature deterioration of the roof covering.
- **Choosing The Right Product...** Some leak barriers may react in high heat conditions; some may not support the weight of tile loading. GAF-Elk’s broad family of leak barriers helps assure the right product for virtually any application.

Installer Confidence

- **Maintain Customer Satisfaction...** Choosing full system components from one manufacturer helps avoid finger pointing, keeping customers satisfied and protecting your reputation.

Choose The Right GAF-Elk Leak Barrier For Each Application...

	WEATHERWATCH^{XT} Mat Surfaced Leak Barrier With X^{TRA} Traction	WEATHERWATCH[®] Mineral Surfaced Leak Barrier	STORMGUARD[®] Film Surfaced Leak Barrier	UNDERROOF² Waterproof Protection Under Tile Roofs
Acceptable Roof Covering(s)	Shingles	Shingles	Shingles, Metal	Shingles, Tile
Surfacing	Mat	Regionally available mineral surfacing	Film with added tackifiers	Spun bond glass reinforced polyester mat
Roll Size	200 sq ft (18.6 sq m)	150 sq ft (13.9 sq m)	200 sq ft (18.6 sq m)	200 sq ft (18.6 sq m)
Roll Length	66.7 ft (20.3 m)	50 ft (15.2 m)	66.7 ft (20.3 m)	67.8 ft (20.7 m)
Roll Width	36 in (0.9m)	36 in (0.9m)	36 in (0.9m)	39.4 in (1.0 m)
Key Benefits	• Glass mat based with special surface compound for added traction underfoot • Up to 60 day exposure • Up to 30 year limited warranty**	• Glass mat reinforced for dimensional stability with classic surfacing material preferred by most contractors • Repositionable for ease in application • Up to 60 day exposure • Up to 30 year limited warranty**	• Glass mat reinforced for dimensional stability • Film surface with added tackifiers for slip resistance • High temperature... 250°F compound for use under metal • Repositionable for ease in application • Up to 60 day exposure • Up to 30 year limited material warranty**	• White surfacing...stays cool • Glass reinforced polyester... a strong durable, dimensional stable product • Repositionable for ease in application • Up to 180 day exposure • Up to 15 year limited material warranty**
